

1、Feature-radiks 截图

- Id与数据载入

- save后图

- mongodb改变图

Key	Value 	Type
▷  (1) oneblockplus.id.blockstack	{ 10 attributes }	Document

2、Models设计

```
import { Model } from 'radiks'

export default class VideoInfo extends Model {
  static className = 'Message'
  static schema = {
    from: String,    //创建者
    content: String, //信息, 现在还没想好传什么, 就一个字符串
    flag: {
      type: Boolean,
      decrypted: true
    }
  }
}
```
